YaraMila™

The Guaranteed Complex Compound Fertilizer

What is YaraMila?

It's a quality trademark guaranteeing the product is a complex compound fertilizer where **all** nutrients declared on the bag are in **every** granule

YaraMila Complex Compound Fertilizer.

Each granule contains the correct balance of Nitrogen, Phosphorus, Potassium and Sulphur

Blended NPK Fertilizer.

Made up of two or more completely separate particles of N, P and K. Often with a large variation in bulk density and particle size.

YaraMila™ BOOSTER Range

... is an NPKS fertilizer

Used throughout the season, Yara's Booster Range have all the nutrients needed to boost grass growth. They deliver nitrate nitrogen and sulphate allowing for immediate root uptake to give grass that immediate lift.

Giving the full complement of nutrients will ensure that there are no deficiencies that might limit your yield or quality.

... is a true uniform compound fertilizer

Yara's Booster Range are true uniform fertilizers meaning that every granule contains the correct nutrient analysis delivering precisely what is needed for immediate uptake and healthy grass growth.

As a compound each granule has the same shape, weight and density so there is no segregation of nutrients in the spreader allowing for an even spread across the field.

... contains selenium to improve grass quality and increase livestock selenium uptake

Yara's Booster Range fertilizers contain sodium selenate which is the most effective form of selenium to promote animal health. By increasing selenium levels in your livestock diet through the grass,

you can reduce the cost of relying on expensive supplements. Selenium is essential for stimulating the immune system and preserving the reproductive health of your cows. A healthy level of selenium will keep the vet away!

... contains sulphur to promote protein levels in silage and increase livestock selenium uptake

Sulphur's impact on yield has been well documented, a 2017 trial undertaken by AFBI concluded that by applying a sulphur enriched fertilizer you could expect to see an increase of around 750kg DM/ha.

But did you know that it can also effect the quality of your silage? A lack of sulphur will limit your forage protein levels. Our Booster fertilizers provide just enough sulphur to maximise yield and improve protein levels.

... is fully traceable

With the YaraMila Booster Range you can trace your fertilizer from factory to field.

Yara's fertilizer production also benefits from the use of our abatement technology which minimises our carbon footprint.
