# BOLIFOR® AQUA

BOLIFOR® AQUA is a unique monocalcium phosphate produced at precise conditions by reacting phosphoric acid and a calcium source in a granulator. The purity of the selected raw materials and Yara's integrated production process, according to GMP+ standards, ensure the consistency of BOLIFOR® AQUA properties.

BOLIFOR® AQUA appears as grey granules and it is highly soluble in water and diluted acids. BOLIFOR® AQUA is odorless and has an acidic taste.

## Nutritive value

Trial data show significant differences in phosphorus digestibility between and within the different generic types of inorganic feed phosphates. The phosphorus digestibility of our feed phosphates has been evaluated by independent research institutes in different species. Trial results demonstrate that BOLIFOR® feed phosphates digestibility values are at the top of the range.
